UNITED INDIA INSURANCE CO. LTD. · KPI APPROACH

KPI Workbench — Database Table Reference

Departments · Roles · KPAs · KPA Bands · Employees — generated 2026-09-16

1. Departments

A simple controlled list — used everywhere else instead of free-text department names.

STRUCTURE

COLUMN	TYPE	RULE
`id`	`bigint`	PRIMARY KEY — auto-generated, never supplied by hand
`name`	`text`	**NOT NULL, UNIQUE** — required; no two departments may share a name

EXAMPLE DATA

Illustrative only — the live database starts empty; these rows are examples for this document, not stored data.

ID	NAME
1	Marketing
2	Claims

2. Roles

Job types, e.g. Marketing Officer, Claims Officer.

STRUCTURE

COLUMN	TYPE	RULE
`id`	`bigint`	PRIMARY KEY
`name`	`text`	**NOT NULL**
`type`	`text`	**NOT NULL, CHECK** — must be exactly `'Fixed'` or `'Tailor-made'`
`description`	`text`	optional

EXAMPLE DATA

Illustrative only.

ID	NAME	TYPE	DESCRIPTION
1	Marketing Officer	Fixed	Handles business development, premium growth targets.
2	Claims Officer	Fixed	Handles claim settlement and turnaround time.

3. KPAs (KPI parameters)

The measurable things themselves — Premium Growth %, Claims TAT, etc.

STRUCTURE

COLUMN	TYPE	RULE
id	bigint	PRIMARY KEY
code	text	**NOT NULL, UNIQUE** — e.g. KPI-001
name	text	**NOT NULL**
definition	text	optional — the formula/description
unit	text	optional — %, days, etc.
direction	text	**NOT NULL, CHECK** — 'higher-better' or 'lower-better'
source	text	**NOT NULL, CHECK** — 'GC', 'WB', or 'Manual'

EXAMPLE DATA

Illustrative only.

ID	CODE	NAME	UNIT	DIRECTION	SOURCE
1	KPI-001	Premium Growth %	%	higher-better	GC
2	KPI-002	Average OD Claims TAT	days	lower-better	WB

4. KPA Bands

The marking-scale rows belonging to one KPA — reference only, never auto-applied to a real mark.

STRUCTURE

COLUMN	TYPE	RULE
`id`	`bigint`	PRIMARY KEY
`kpa_id`	`bigint`	FOREIGN KEY → kpas.id, **NOT NULL**, `ON DELETE CASCADE`
`label`	`text`	**NOT NULL** — e.g. "At Target"
`min_delta`	`numeric`	nullable — `NULL` means open-ended floor
`max_delta`	`numeric`	nullable — `NULL` means open-ended ceiling
`mark`	`numeric`	**NOT NULL**
`sort_order`	`int`	**NOT NULL**, defaults to `0`

Dependency: the parent KPA (`kpa_id`) must already exist — this is a child table. If the parent KPA is deleted, its bands are deleted automatically (`CASCADE`).

EXAMPLE DATA

Illustrative only — bands for KPI-001 (Premium Growth %, higher-better).

ID	KPA_ID	LABEL	MIN_DELTA	MAX_DELTA	MARK
1	1	At Target	0	0	90
2	1	Slightly below	-1	-0.01	80
3	1	Well above (ceiling)	1.01	(open)	100

5. Employees

The central "hub" table — one row per **person + role + KPA** combination, not one row per person.

STRUCTURE

COLUMN	TYPE	RULE
id	bigint	PRIMARY KEY
emp_code	text	**NOT NULL** — e.g. EMP1001; not unique alone, since one person has multiple rows
name	text	**NOT NULL**
department_id	bigint	FOREIGN KEY → departments.id, nullable (optional)
office_code	text	optional
role_id	bigint	FOREIGN KEY → roles.id, **NOT NULL**
kpa_id	bigint	FOREIGN KEY → kpas.id, **NOT NULL**
weightage_pct	numeric	**NOT NULL, CHECK** — between 0 and 100
start_date	date	**NOT NULL**
end_date	date	optional

Table-level: `UNIQUE (emp_code, role_id, kpa_id)` — the same person can't have two identical role + KPA rows.
Trigger-enforced (not a plain constraint): every row sharing one `emp_code` — across *all* their roles — must have `weightage_pct` values that sum to exactly **100**. Enforced by `fn_check_employee_weightage_sum()`, fired as a deferred constraint trigger: insert all of a person's rows in one transaction, or keep an existing row's percentage corrected so the running total is always 100 after each statement. An unbalanced total raises an error such as *"Employee EMP1001 KPA weightages must sum to 100 across all roles (currently 80)"*.

EXAMPLE DATA

Illustrative only — two rows for one person (A. Sharma), correctly summing to 100%.

ID	EMP_CODE	NAME	ROLE_ID	KPA_ID	WEIGHTAGE_PCT	START_DATE
1	EMP1001	A. Sharma	1	1	60	2026-04-01
2	EMP1001	A. Sharma	1	2	40	2026-04-01
